

## NEWS RELEASE

### SUMMARY OF RESULTS

**JULY 19, 2016** - Vancouver, British Columbia, Canada: Oriental Non-Ferrous Resources Development Inc. (the “**Company**” or “**ONFRD**”) wishes to provide a summary of results of molybdenum analysis from six diamond drill holes completed in 2015 in the Kharganii am-1 Molybdenum Property (the “**Property**”). The Company remains pleased and encouraged by the Molybdenum results received from the drill hole intercepts on the property located in the Tövaimag of Mongolia.

Elevated and anomalous Molybdenum results were received in all drill holes along the southwest corner of the property with the best results averaged 2.413% Mo over 3.0 meters.

A summary of significant drill hole results for molybdenum are highlighted in the table 1 below. All intervals are reported as drill core widths.

Table1 Summary of Significant Drill Hole Results for Molybdenum.

| Drill Hole    | From (m)     | To (m) | Width (m) | Mo %  |
|---------------|--------------|--------|-----------|-------|
| <b>ZK15-6</b> | 120.30       | 123.3  | 3.0       | 0.067 |
|               | 126.80       | 129.0  | 2.2       | 0.076 |
|               | 133.00       | 135.00 | 2.0       | 0.135 |
|               | 244.10       | 246.10 | 2.00      | 0.094 |
|               | 306.20       | 309.20 | 3.00      | 0.148 |
|               | 538.60       | 560.80 | 22.2      | 0.057 |
|               | 574.20       | 580.2  | 6.00      | 1.23  |

|                            | 130.60   | 132.60 | 2.00      | 0.080 |
|                            | 185.20   | 186.40 | 1.20      | 0.11  |

The exploration drilling program in the property was carried out by contractor Mongolian Zheng Yuan Ltd. (Zheng Yuan). All drill core logging and sample preparation was conducted by geologists of Zheng Yuan at drilling site. The NQ-sized drill core was split in half using a rock saw and one-half of the drill core was kept in the core tray for reference purposes and the other half core was individually bagged, tagged, and sealed. The molybdenum analysis was performed by Zheng Yuan Analytical Laboratories in Mongolia.

Blank of glass, standards and duplicates were inserted into the sample streams at 5% of all assays; more than 10% and 5% of samples were selected for internal and external auditing test respectively.

For purpose of this press release, on June 17, 2016, independent Qualified Person (QP) Yungang Wu, P. Geo collected five samples from coarse rejects and pulps and sent to SGS IMME Mongolia LLC for Mo analysis. The due diligent (DD) sample results are presented in table 2 below and show repeatable results.

Table 2 QP Due Diligent Sample Results

| Hole ID | From   | To     | Original Sample ID | Original Mo% | DD Sample ID | DD Mo% |
|---------|--------|--------|--------------------|--------------|--------------|--------|
| ZK15-6  | 650.60 | 651.60 | H15343             | 0.120        | Mo1          | 0.126  |
| ZK7-6   | 463.10 | 464.10 | H15595             | 0.084        | Mo2          | 0.083  |
